Architecture of the PHI Solution

Person requests, amends or annotates PHI. Person requests designated record set. Communications between covered entity and person or another covered entity.

Secure
PHI
Server

PHI Systems Integrator's Application

Systems Integrator builds PHI application based on standard data objects and metadata. Loads and updates PHI Repository.

Remote

Remote access to Repository

Covered entities in contracts can access PHI under a "selective transparency" security, access and control model implemented in Repository.

Local
Users

PHI Administrator

Customer PHI administrator creates data definitions for PHI to create PHI attribute for enterprise.

Perseid Software PHI Repository

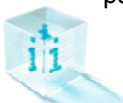

Intelligent Storage Architecture

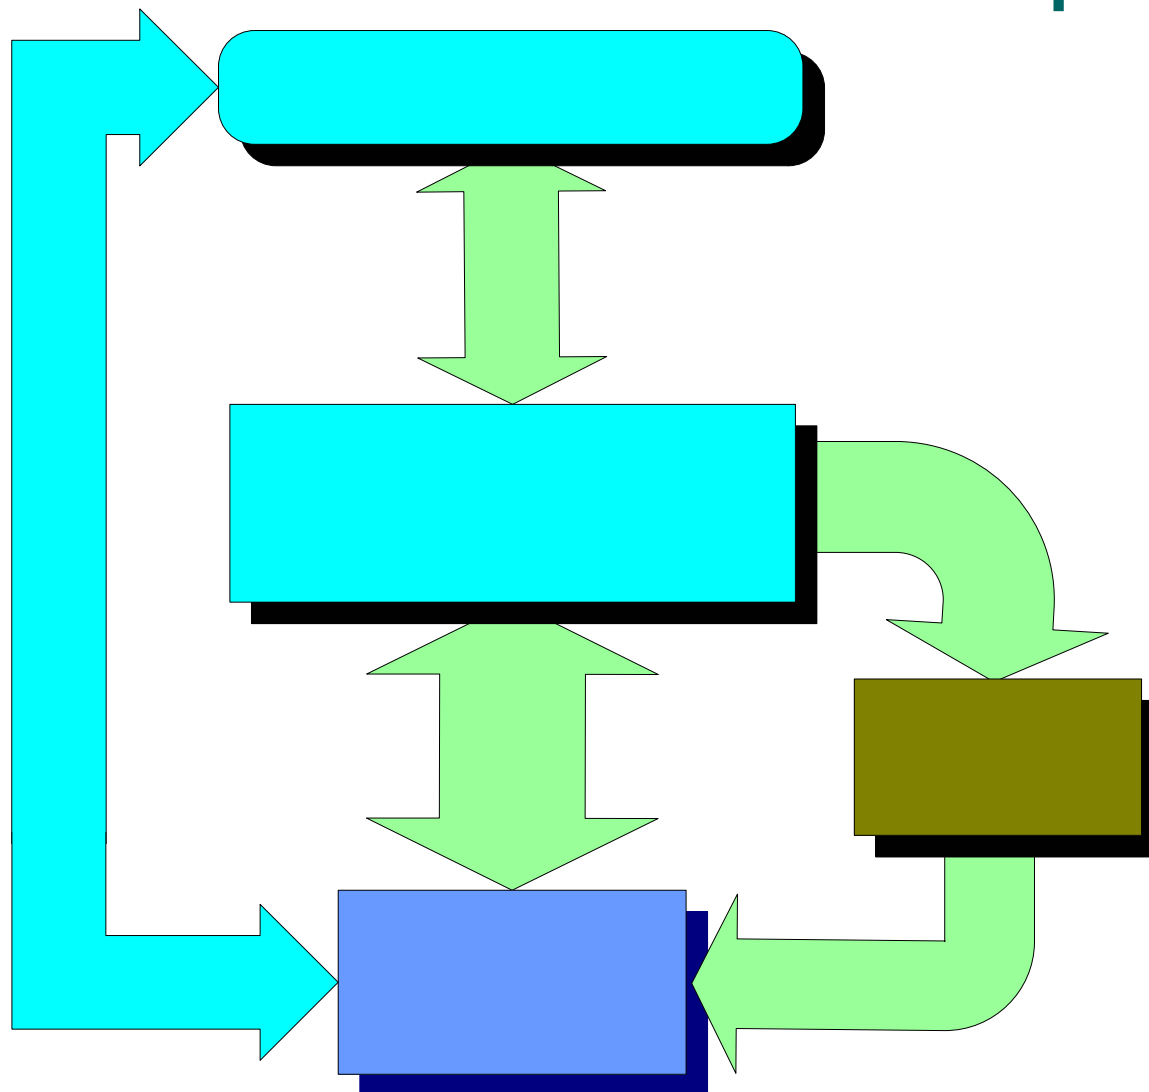

Enterprise Intelligent Storage PHI Repository becomes a HIPAA solution and an enterprise data repository for clinical, financial and administrative data with full audit trails and personal security.

Personal Health Information

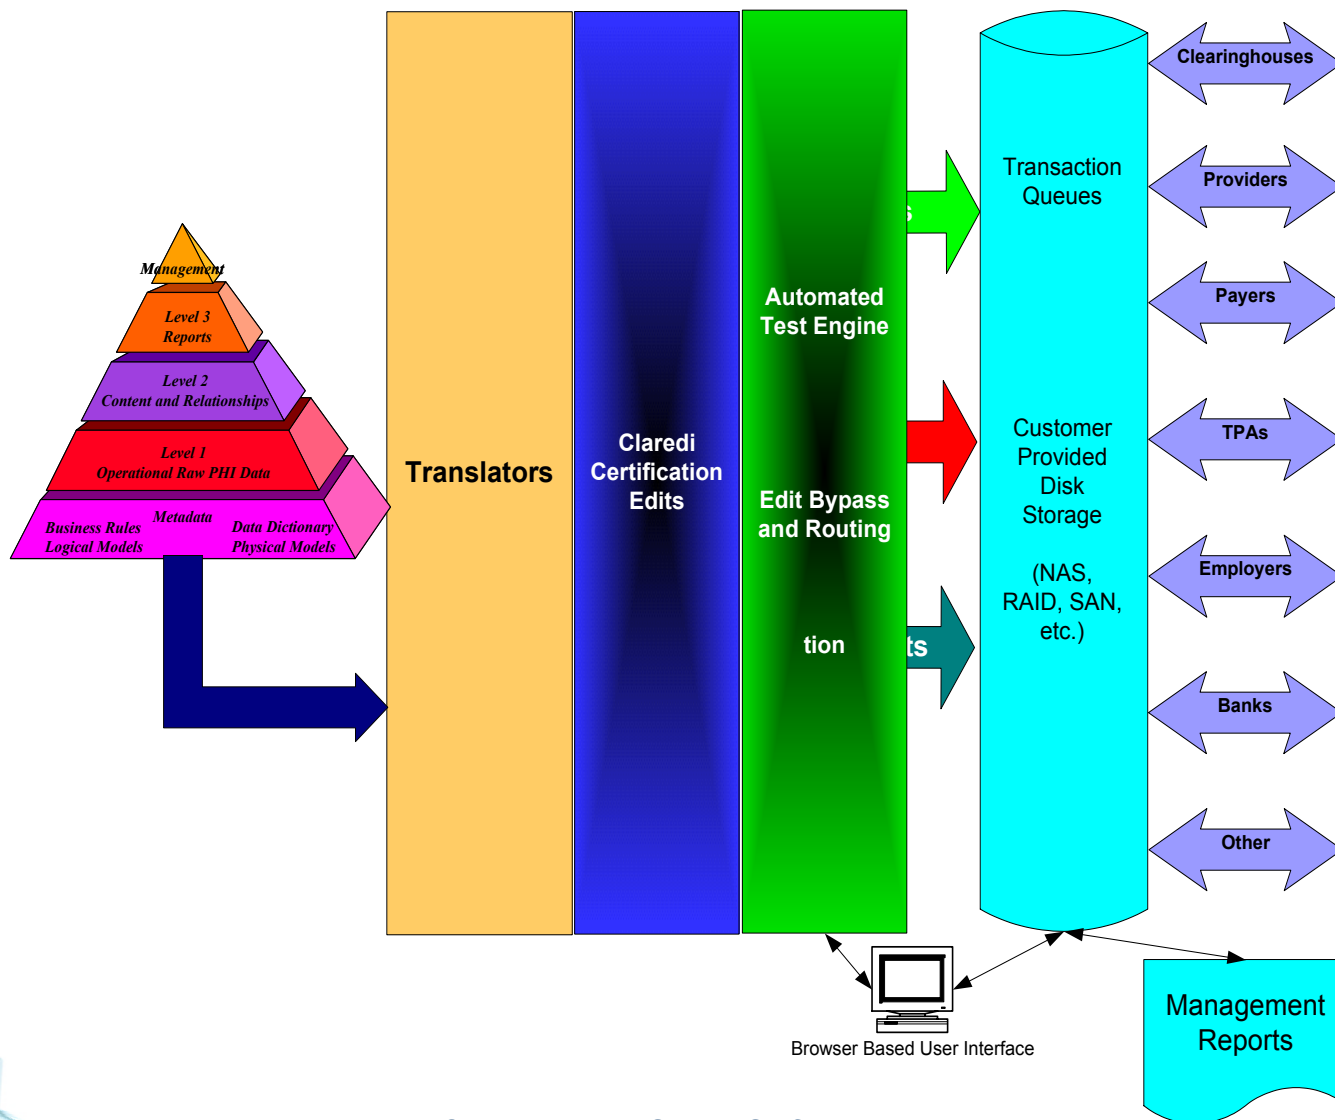

Healthcare designated datasets, annotations, images, email, faxes, datasets to patients, audit trails
