

PERSEID
Software Limited
Database Design & Data Warehousing Services

Delivering a return-on-investment from information

To thrive in today's marketplace, it is not enough for a company to merely possess data. The successful enterprise designs, organizes and actively takes advantage of its data resources to ensure that key decision-makers have immediate access to the strategic information they need and a quantifiable return on their investment. The successful ROI-driven enterprise creates information from data and a competitive advantage from information.

Data warehousing can give your organization 20:20 vision. Smart enterprises realize accurate information can result in accurate decisions, and that there are many ways to leverage information resources: new products, new markets, more efficient ways of doing business: locally and globally.

At Perseid Software, our database and data warehousing design team delivers strategic consulting and implementation services to help our clients design, construct, integrate and leverage their valuable information.

The successful database design and warehousing strategies we provide can give you a full understanding of your business, customers, products, and the issues or trends affecting your company's position in the market.

Strategic database design and data warehousing services with Perseid Software can enable you to:

- Gain access to critical business information
- Solve problems that are unique to your healthcare or disability market
- Build a successful e-business solution

- Provide timely information about customers
- Expand business with existing customers
- Find new customers
- Create new products or services
- Create a sustainable competitive advantage
